Perfect — here's a full Planetary Pulse Engine flow diagram in text format (so you can later render it in something like Mermaid, Graphviz, or draw.io). It shows aura_core, agents, Lucy, dashboard, and governance interactions clearly:

```
flowchart TD
    %% Core Simulation
    A[aura_core: Locked Math Engine] -->|Updates KTE, CEI, TT1, Coherence| B[Simulation State]

    %% Agents proposing changes
    subgraph Agents
        E1[Energy Agent] -->|Proposes T_i| G[Governance Middleware]
        E2[AI Agent] -->|Proposes A_i| G
        E3[Policy Agent] -->|Proposes P_i| G
        E4[Collective Intelligence Agent] -->|Proposes C (Coherence)| G
    end

    %% Governance / Middleware
    G -->|Validation / FORB_CHECK| B
    G -->|Logs & Audit| L[Audit Ledger]

    %% Lucy Interface
    L1[Lucy Planner] -->|Queries aura_core State| B
    L2[Interface Manager] -->|Routes agent feedback & user queries| L1
    L3[Eagle Eyes] -->|Monitors agent execution| Agents
    L4[Memory / Reward] -->|Stores past states| B
    L5[Voice & Visual] -->|Outputs explanation & alerts| D[Dashboard]

    %% Dashboard / Sonification
    B -->|Provides metrics| D
    D -->|Visualizes K(t), CEI, Coherence, Monte Carlo bands| User[Human User]

    %% Data Inputs
    F[Real-time Streams / API Clients] -->|Feeds variables| B

    %% Risk & Preflight
    R[Risk Management / Preflight Checks] -->|Ensures no unsafe ops| G
```

Flow Explanation

1. Agents propose changes → sent to Governance Middleware

2. Governance Middleware validates via FORB_REGISTRY, logs all actions

3. Valid changes update the Simulation State in aura_core

4. Lucy Planner queries aura_core, interprets results, explains causality, and produces insights

5. Eagle Eyes observes agents in real time → correction / confidence weighting

6. Memory / Reward keeps historical states for learning & explanation

7. Dashboard visualizes:

KTE trajectory

Coherence C

TT1 / Type-1 probability

Monte Carlo bands for uncertainty

Sonification for pulse / alerting human operators

8. Risk Management / Preflight Checks ensure agents cannot execute forbidden interventions

---

This diagram is fully representative of the system blueprint. Every interaction is controlled: no agent or Lucy module can bypass governance, and all calculations go through aura_core as the single source of truth.

If you want, I can now draw a fully annotated version of Lucy's folder & logic flow alone, showing how each submodule interacts with aura_core and agents, so it's 100% visual and easy to follow.

Do you want me to do that next?
