The natives you'll need to trigger a scripted voice mission with a phone call-like prompt (similar to GTA 5 missions) in FiveM Lua primarily revolve around loading audio banks, preloading and starting scripted phone conversations, playing ringtone sounds, and checking/handling the conversation state. These mimic the in-game phone calls where an NPC "calls" with voice dialog.

Here's a high-level overview of the key natives (with their hashes for use in Lua via InvokeNative or similar). You'd typically load an audio bank, play a ringtone sound to prompt the player, wait for input (e.g., a key press to "answer"), then start the preloaded conversation. Audio banks and speech names come from GTA 5's script files (e.g., "audio\scenes\mission_audio.dat" or specific mission banks like "michael1").

REQUEST_SCRIPT_AUDIO_BANK (0x2F794A5A1F5DC8AB): Loads a specific audio bank containing the conversation audio (e.g., REQUEST_SCRIPT_AUDIO_BANK("SCRIPT\\MISSION_AUDIO", false)). Required before preloading conversations.

RELEASE_SCRIPT_AUDIO_BANK (0x7A2D8AD0A9EB9C3F): Releases the loaded audio bank when done to free resources.

PRELOAD_SCRIPT_PHONE_CONVERSATION (0x6004BCB0E226AAEA): Preloads a scripted phone conversation. Parameters: BOOL displaySubtitles, BOOL addToBriefScreen. Use this for phone-specific dialog to apply the distorted "phone" audio filter.

START_SCRIPT_PHONE_CONVERSATION (0x252E5F915EABB675): Starts the preloaded phone conversation. Parameters: BOOL p0 (usually true for subtitles), BOOL p1 (usually false).

STOP_SCRIPTED_CONVERSATION (0xCB0D0DF4F2BE1585): Stops the ongoing conversation. Parameters: BOOL p0 (true to fade out).

IS_SCRIPTED_CONVERSATION_ONGOING (0x167BD68D0A4F0DEC): Checks if a scripted conversation is active. Returns BOOL.

PLAY_SOUND_FRONTEND (0x67C540AA08E4A6F5): Plays the ringtone sound to prompt the call (e.g., PLAY_SOUND_FRONTEND(-1, "Remote_Ring", "Phone_SoundSet_Default", true)). Use this to simulate the phone ringing.

STOP_SOUND (0xA3B0C537EFD25BA0): Stops the ringtone sound after "answering."

PLAY_PED_AMBIENT_SPEECH_WITH_VOICE_NATIVE (0x3523634255FC3318): Optional for additional ambient speech during/after the call. Parameters: Ped ped, char* speechName (e.g., "GENERIC_HI"), char* voiceName (e.g., "MICHAEL_NORMAL"), char* speechParam (e.g., "SPEECH_PARAMS_FORCE"), BOOL p4. Use "SPEECH_PARAMS_FORCE_MEGAPHONE" for distorted audio if needed as a fallback.

For the full flow in Lua:

Load the audio bank.

Preload the phone conversation.

Play the ringtone sound.

Wait for player input (e.g., via IsControlJustPressed) to "answer."

Start the conversation.

Monitor if it's ongoing and stop when done.

Note: Speech names and voices must match GTA 5's data (e.g., from decompiled scripts or dumps). For custom audio, you'd need modded banks, but for vanilla-like missions, use existing ones. Combine with UI elements (e.g., display help text via

BEGIN_TEXT_COMMAND_DISPLAY_HELP) to prompt answering.a99e01d0a2b65b447b9c33fcf848575d51037088978174ac1d7c9c89d97fd3c3ccd3c54e
