Validation Test
You can now run a full-stack check of the system's current state (2026 baseline):from aura_core import calculate_kte, calculate_cei, SAMPLE_CURRENT

from uncertainty_engine.monte_carlo_engine import run_monte_carlo_kte

```
# 1. Calculate Baseline
kte_2026 = calculate_kte(**SAMPLE_CURRENT)

# 2. Run Uncertainty Analysis
uncertainty = run_monte_carlo_kte(n_sim=1000)

print(f"KTE 2026: {kte_2026}")
print(f"95% Confidence: {uncertainty['95_ci']}")
```
